

function $x = f(n)$

$x = 1;$

for $i = 1:n$

for $j = 1:n$

$x = x + 1;$

$$T(n) = 1 + (n+1) + (n^2+n) + n^2$$

$$T(n) = 2 + 3n + 3n^2$$

The dominant term is n^2 , so runtime is $O(n^2)$.
